Computhink Makes Adding Document Management to 3rd Party Applications a Cinch with the ViewWise Application Enabler.

Lombard, IL – July 30, 2008 – Computhink today announced the release of the ViewWise Application Enabler. The ViewWise Application Enabler allows an organization to easily add ViewWise Document Management functionality to 3rd party business line applications such as Microsoft (Dynamics), Intuit, Sage, SAP, Oracle, and more.

“Organizations have realized the need for document management capability for years now, but some have been held back because of the complications with interacting with their existing business line applications” says Vince Smolek, Director of Product Management for Computhink. “The ViewWise Application Enabler ensures that adding document management is no longer a daunting, complicated, programmatic task and instead makes it a matter of selecting the fields to integrate with and then creating the action to perform. It is really point-and-click.”

Taking advantage of advanced targeting and capture technology from EnableSoft Inc., the ViewWise Application Enabler allows organizations to interact with data from the majority of Windows or web-based applications on the market today. With ViewWise’s EnableSoft Targeting technology, you can grab the data you need directly from the business applications screen and send it to ViewWise. You can then easily create actions to perform ViewWise index searches, full text searches, append data, create new documents, and more.

The ViewWise Application Enabler not only reduces the time to develop seamless integrations between ViewWise and business line applications by reducing the need for programming, it also extends the number of applications an organization can integrate with by eliminating the need for the business line applications to even offer an API.

As a document management solution, ViewWise offers complete document management / enterprise content management functionality that rivals solutions that sell for double or triple the cost. ViewWise offers secure desktop and web access, storage management, retention, workflow, document imaging, email archiving, Microsoft Office and GroupWise integration, support to view, search, and print from over 400 files formats, and much more.
